IN THE US… BEING INFECTED WITH HPV CAN LEAD TO...

PROTECT BOTH YOUR SONS AND DAUGHTERS FROM CANCER WITH THE HPV VACCINE

PROTECT YOUR DAUGHTER
Each year, there are 12,000 CASES OF CERVICAL CANCER leading to OVER 4,000 DEATHS IN WOMEN

PROTECT YOUR SON
Each year, there are 9,300 CASES OF HPV-RELATED CANCERS IN MEN

THE HPV VACCINE

It is important to protect your child from the disease early.

THE HPV VACCINE CAN...

ONLY PREVENT infections, NOT TREAT THEM
Reduce Risk of HPV-related cancers BY UP TO 99% when fully protected with the recommended doses
Prevent your child from SPREADING HPV to future sexual partners

The recommended age to receive the HPV vaccine is 11 or 12, however it is not too late for 13-26 year olds to get vaccinated as well.

11-12 YEAR OLDS

THE HPV VACCINE IS SAFE AND EFFECTIVE

Clinical trials and ongoing research have shown the HPV vaccine’s protection remains strong for at least 10 YEARS.
There is no evidence to suggest this level of protection changes over time.

Since the vaccine was licensed, ONLY 0.0003% of patients reported side effects – and most of those were “non-serious” symptoms such as headache, nausea and dizziness.

You are the key to HPV cancer prevention.
Get your child vaccinated at the recommended age of 11 or 12 years, to protect them and their future partners from contracting HPV.
